'benign fibromatous tumors of the testis and paratesticular May 14th, 2020 - benign intrascrotal fibrous proliferations are uncommon with most arising from the paratesticular region and falling into the category of so-called fibrous pseudotumor. We describe two neoplastic forms of benign fibrous tumor of the testis and its adnexa: fibroma of gonadal stromal origin and fibroma of the testicular tunics.'

testis invasion has been reported by some to be associated with higher risk of relapse in clinical stage I seminoma. Hilar soft tissue invasion (Figure 1) is the predominant pathway of extratesticular extension for testicular tumors. However, the issue of hilar soft tissue invasion has not been addressed by AJCC TNM and its clinical significance also has not been studied well.

POLYEMBRYOMA OF THE TESTIS

May 1st, 2020 — The testis was largely replaced by a circumscribed predominantly pathology of the testis and its adnexa contemporary issues in surgical pathology. Modern Pathology ISSN 1530-0265
